

US-CHINA
BUSINESS
COUNCIL

JUNE 2017

STATE EXPORT REPORT

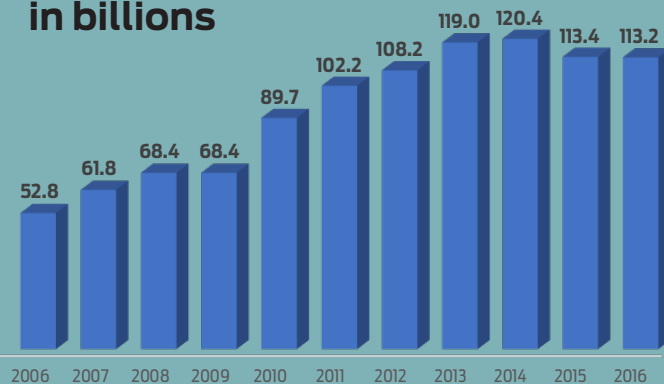

CHINA IS ONE OF THE TOP FIVE GOODS
OR SERVICES EXPORT MARKETS FOR 49 STATES

Executive Summary

Exports to China: Vital to US economic growth

- **China's economic growth rate is slowing, but it remains an important market for US exports.** In 2016, US goods exports to China totaled \$113 billion, holding steady with the previous year and still the third-largest US goods export market behind Canada and Mexico, our neighbors and NAFTA partners.
- **Exports of services to China are becoming significant.** In 2015, the most recent complete year of available data, US services exports to China totaled \$47 billion, making China the United States' third-largest services export market. From 2006 to 2015, US services exports to China increased more than 400 percent. Services exports to the rest of the world increased 76 percent.
- **Global trade is slowing, but exports of US goods and services to China continue to outpace exports to other major markets.** On average, US goods exports to China grew by 8 percent annually over the past 10 years, despite the modest decline over the past two years versus 2014. Of the United States' top 10 goods export markets, only Japan had positive export growth in 2016, reflecting an overall slowdown in global trade.
- **US services exports to China grew more rapidly than all other major trading partners, averaging nearly 19 percent annually over the last decade.** Only Brazil came close over the same period, with 17 percent average annual growth. The 6.8 percent growth in services exports to China in 2015 far outpaced growth in exports to the United States' top three markets: the United Kingdom (3.4 percent), Canada (-9.2 percent), and Japan (-5.2 percent).
- **China's maturing economy is undergoing important changes that have resulted in a slowdown in GDP and trade growth. Even so, US exports of goods and services to China have grown faster than exports to any other major US trading partner over the past decade.** From 2006 to 2016, US goods exports to China increased 114 percent. That is greater than the growth to any of the other top 10 US goods export markets, including the two largest US trading partners: Canada (41 percent growth) and Mexico (13 percent growth).
- **Exports continue to play an essential role in the US economy and job growth.** US goods exports to China come from a wide range of industries including transportation equipment, agriculture, computers and electronics, and chemicals. These exports also sustain logistics jobs in America's ports and throughout the country. US services exports to China included travel and education, royalties, transportation, business and professional services, and financial services.

STATE EXPORT REPORT

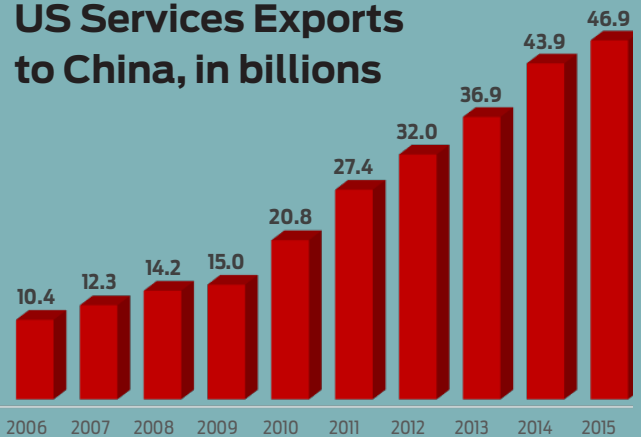

China: An important market for states across the country

- **Most states have seen significant increases in exports of goods and services to China since 2006.** Thirty states experienced at least triple-digit goods export growth to China since 2006, and four states saw growth of more than 500 percent over the same period: Alabama, Montana, North Dakota, and South Carolina. Every US state had triple-digit services export growth to China since 2006, 16 states had export growth of more than 400 percent.
- **China is among the top five goods and services export markets for most states.** China was a top three goods export market for 39 states in 2016, and among the top five for another eight states. That includes states that are not usually associated with strong China trade ties, including Alabama, Arizona, Minnesota, Michigan, New Jersey, New York, Pennsylvania, Ohio, South Carolina, and Tennessee.
- **The value of US goods and services exports to China is significant.** Last year, 29 states exported more than \$1 billion in goods to China, while another 11 states exported more than \$500 million. In 2006, only 17 states exported more than \$1 billion of goods to China and only one state exported more than \$1 billion in services to China – California.
- **While larger states like Texas, California and New York saw significant growth in exports to China, smaller states benefited, too.** Kentucky, Kansas, Utah, Wyoming, Rhode Island, Mississippi, Nevada, and New Hampshire all experienced more than 200 percent growth in goods or services exports over the past decade.

More can be done to strengthen US exports to China

- **China is a significant market for US exports and it should be even bigger.** The United States has a small share of China's overall market. US goods accounted for about 8.4 percent of China's total imports in 2015, trailing behind China's purchases from the European Union, South Korea, Japan, and Taiwan. That market share represents a decline from 2000, when the United States held a 10 percent share of China's import market.
- **Expanding market opportunities in China requires a variety of tools.** China maintains an array of tariff and non-tariff barriers that prevent more American goods, agriculture products, and services from reaching Chinese customers. The United States should continue to bring legally sound, industry-supported cases to the World Trade Organization. Congress should expand the resources at the Office of the United States Trade Representative to build upon the successful track record of using the WTO to address unfair Chinese trade practices. The Trump administration should pursue results-oriented engagement with China designed to address barriers of longstanding concern.
- **In addition, the United States should push forward negotiations with China on a high-standard bilateral investment treaty,** which would reduce ownership and licensing barriers that keep American companies from selling more products and services in China, including exports.

US Services Exports to China, in billions

US GOODS EXPORTS TO CHINA HAVE GROWN 348 PERCENT SINCE 2006

Source: Estimated by The Trade Partnership

Methodology

This year's edition of the US-China Business Council (USCBC) US Exports to China by State report uses data provided by The Trade Partnership, an economic research firm. The report provides a separate breakdown of each state's goods and services exports to China. The national export totals include the export data for each state and for Washington, DC.

Goods export figures are based primarily on data from the US Census Bureau, the US Department of Agriculture (USDA), and Moody's Analytics. Goods export figures are classified according to the US government's North American Industry Classification (NAICS) system. Services export figures are based primarily on data from the US Bureau of Economic Analysis (BEA) and Moody's Analytics. Services export figures are classified according to the BEA categories.

This year's edition of US Exports to China by State uses more detailed sector categories for both goods and services. The number of reported goods sectors increased from 29 last year to 104 this year, while the number of reported services sectors increased from 8 to 33. In both cases, the more detailed sectors provide a better sense of the types of goods and services exported to China. For example, whereas past editions reported exports of "Machinery," this edition breaks those exports down further to "Agricultural & Construction Machinery" and "HVAC & Refrigeration Equipment" and "Engines & Turbines."

Goods exports cover 2006-2016; services exports are reported through 2015, the most recent year detailed services export data are available from BEA. As historical data from each of these sources is revised annually, this issue of US Exports to China by State replaces all prior editions.

Similar to previous editions of US Exports to China by State, this report uses a methodology that credits agricultural exports to states where crops are grown as opposed to states with large ports where bulk commodities are aggregated prior to export. A detailed explanation of the methodology for goods and services export estimates is available at <http://tradepartnership.com/data/cdxports-and-cdxjobs/>.

This year's edition of US Exports to China by State includes estimates for U.S. jobs supported by exports to China from each state. Estimates for "direct" and "indirect" jobs tied to exports to China from a given state are derived using domestic employment requirement tables from the U.S. Bureau of Labor Statistics. Estimates are calculated at the sector level and then summed to determine the total U.S. jobs supported by exports from the state. All reported jobs figures are for 2015, the most recent year available for both goods and services. Since "indirect" jobs may be located outside the state (e.g., autos exported from South Carolina may support tire manufacturing jobs in Ohio), it is important to note the distinction between "U.S. jobs supported by exports from Ohio to China," as reported here, and "jobs in Ohio supported by exports to China," which are not reported here.

Additional notes on goods export categories:

NAICS 3399 (Miscellaneous Manufacturing) – According to the Census Bureau, "Miscellaneous Manufacturing" includes a wide range of products that cannot readily be classified in specific NAICS subsectors in manufacturing. Establishments in this subsector manufacture products as diverse as jewelry, sporting goods, toys, and office supplies.

NAICS 9100 (Waste & Scrap) – The Census Bureau includes a variety of second-hand scrap and recycled materials in this export classification, including ferrous metals, copper, aluminum, paper, wood, and sawdust. Many of these products are used by China to produce rebar steel and packaging materials.

STATE EXPORT REPORT

Additional notes on services export categories:

Credit-Related Services – BEA classifies non-depository, non-investment financial transactions as credit-related services. The services may include credit card issuing, sales financing, trade financing, and similar activities.

Royalties from Industrial Processes – According to the BEA, “Royalties from Industrial Processes” include transactions with nonresidents that involve intangible assets – including patents, trade secrets, and other proprietary rights – that are used in connection with the production of goods.

Top US Goods Export Markets, 2016

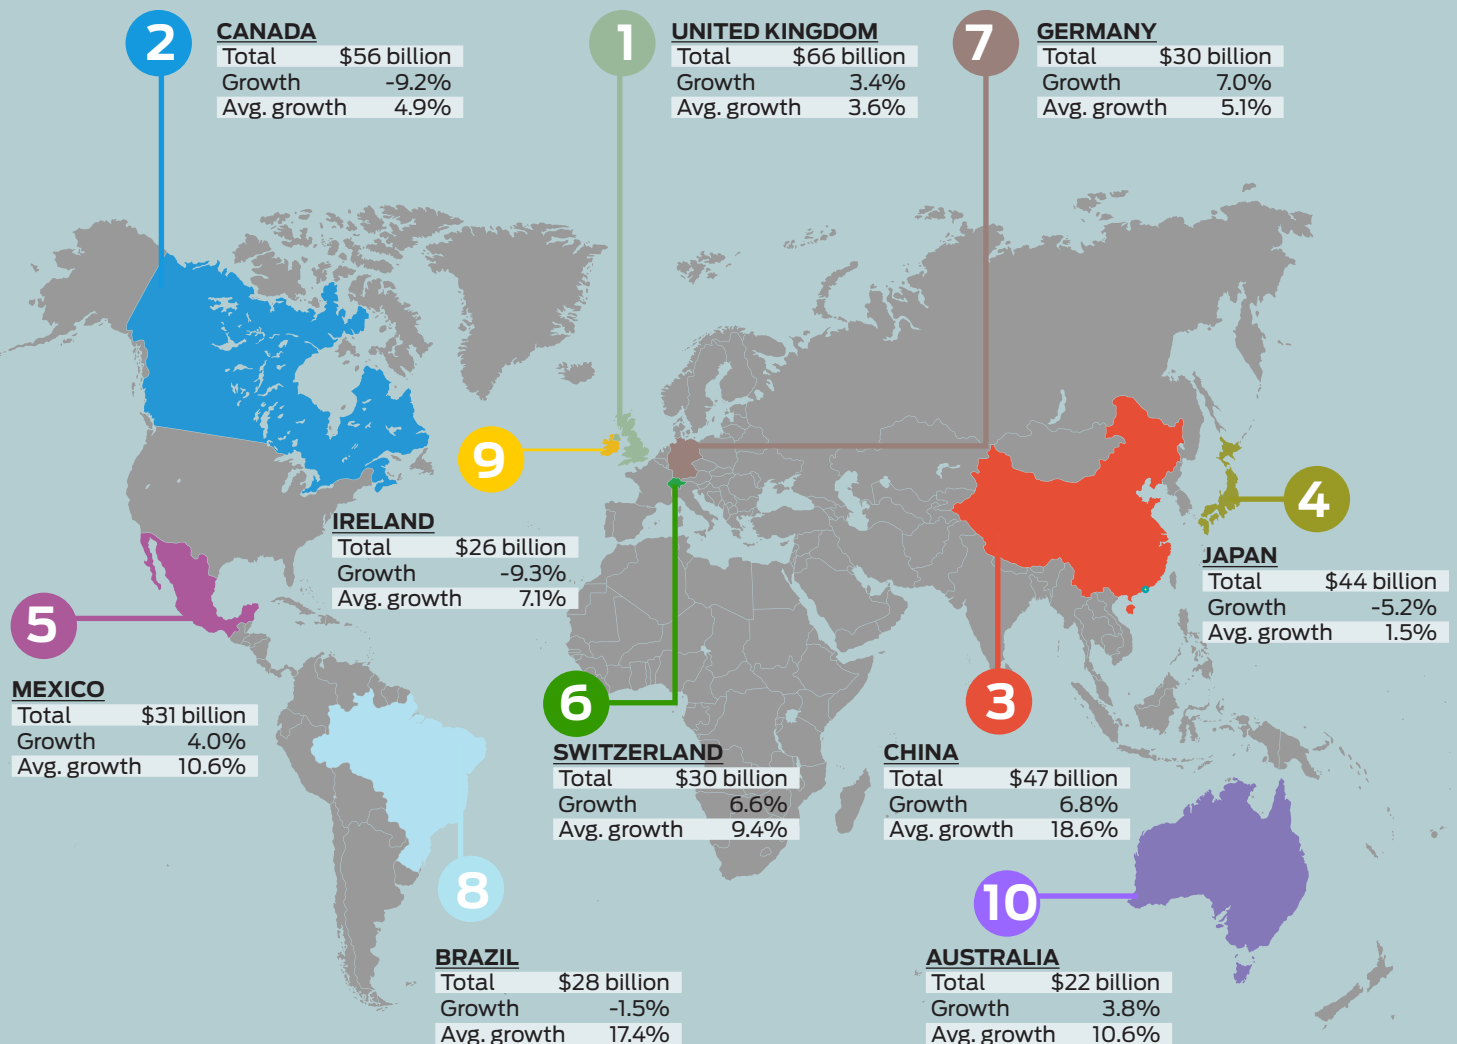

Growth represents 2016 annual growth. Average growth represents the average annual growth from 2006-2016

- China continues to be an important market for US goods exports, even as China's economy slows. China is currently the United States' third-largest export market. In 2016, US exports to China reached more than \$113 billion.
- Although US exports to China slowed in 2016 compared to previous years, US exports to China have grown faster over the last decade than exports to the other top 10 US trade partners.
- Hong Kong is often a throughpoint for US exports ultimately destined for China. In 2016, combined US exports to Hong Kong and China totaled nearly \$145 billion.

Top US Services Export Markets, 2015

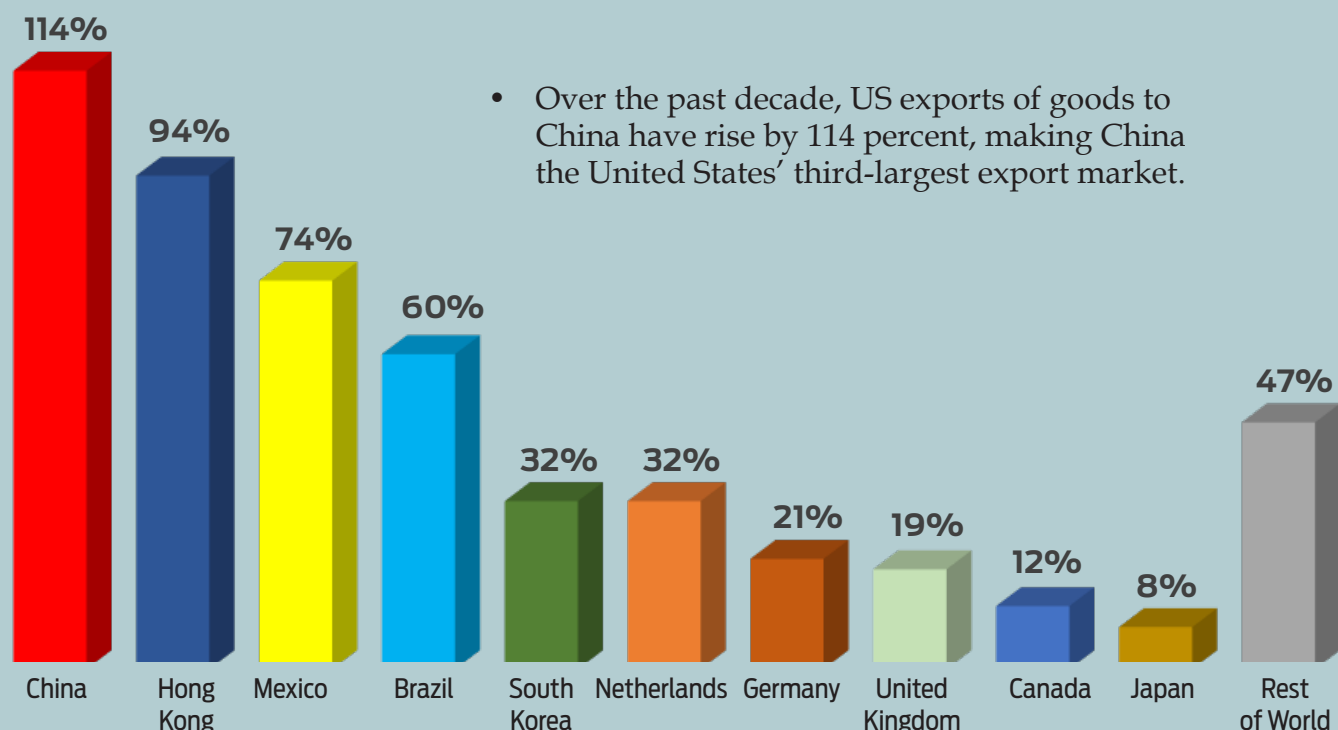

Growth represents 2015 annual growth. Average growth represents the average annual growth from 2006-2015.

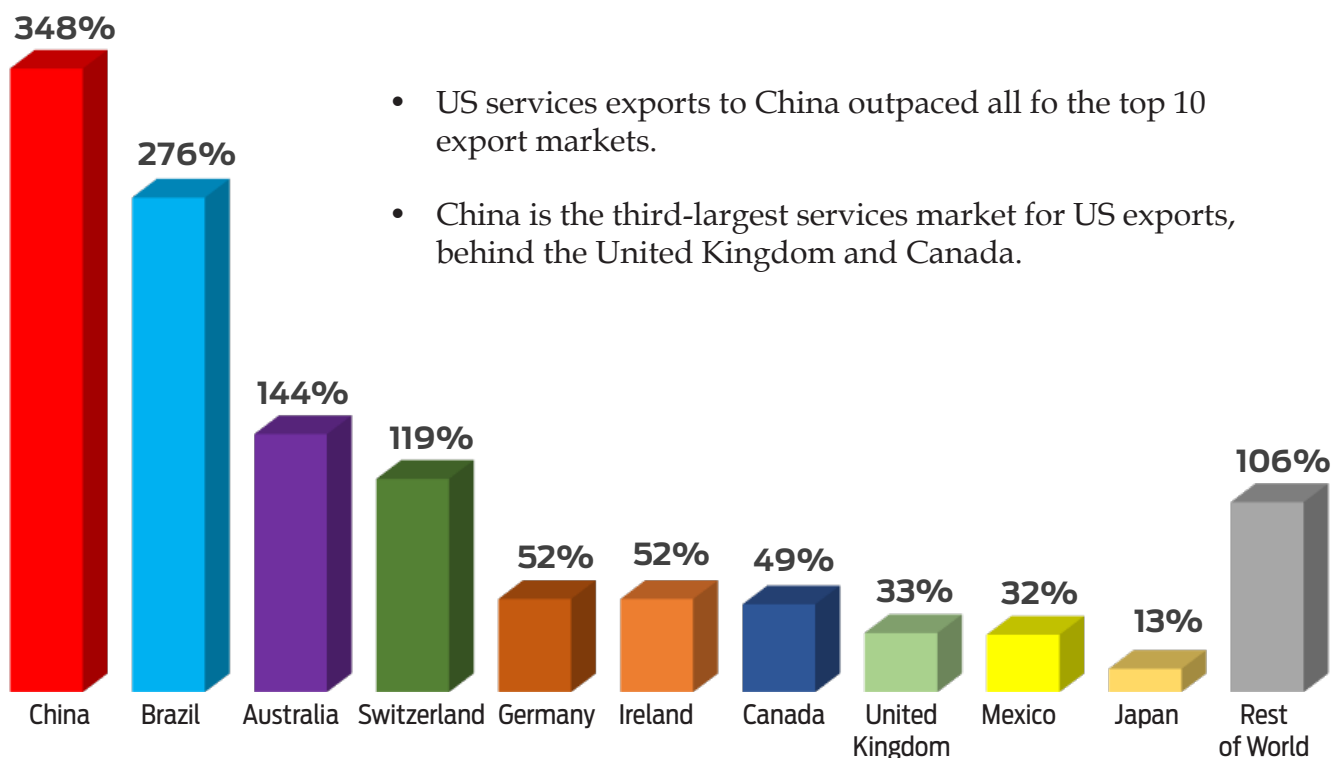

- China is an increasingly important market for US services exports and is currently the United States' third-largest export market. In 2015, US exports to China reached more than \$47 billion.
- Despite China's slowing economy, US exports to China have grown faster over the last decade than exports to any other top US trade partner. US services exports include travel and tourism, when Chinese students and visitors come to the United States; royalties from industrial processes, such as patents; and business management and advisory services.

Fastest growing US export markets

Most growth in US goods exports from 2006-2016

Most growth in US services exports from 2006-2015

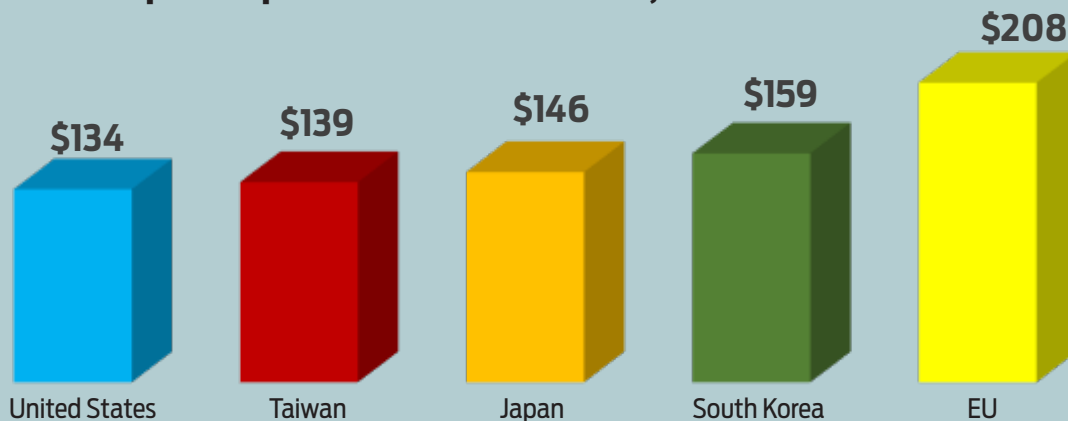

Note: Rankings are based on export data for 2006 and 2016 for goods, and 2006 and 2015 for services, comparing the top 10 markets for US exports. "Rest of World" export growth for this page is calculated using the cumulative sums for US exports to all remaining markets (non-top 10) for those years. Full-year services export data are available only through year-end 2015.

China's imports

China's top 5 import sources in 2016, in billions

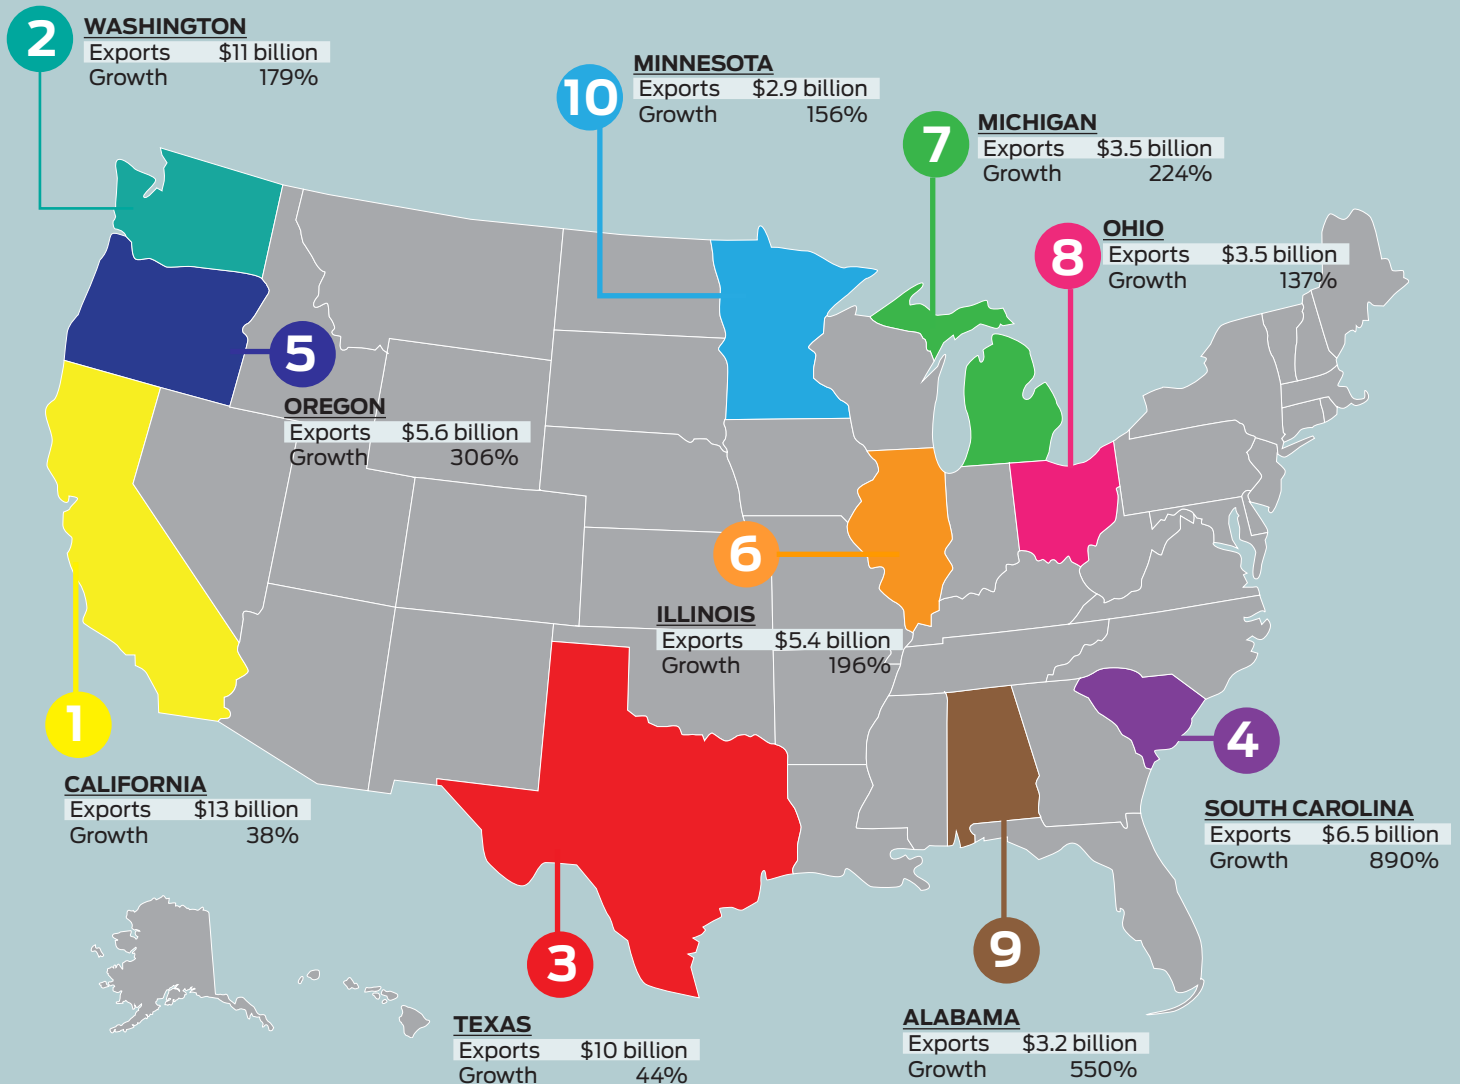

THE UNITED STATES IS ONLY CHINA'S FIFTH-LARGEST SOURCE OF IMPORTS

- The European Union and South Korea continue to export more goods to China than the United States. The United States also fell two places in 2016 to become the fifth-ranked source of imports for China, overtaken by Taiwan and Japan.
- Although US exports to China have grown significantly over the last decade, US imports to China in 2016 accounted for about 8.4 percent of China's total imports.
- China's slowing economy has had an impact on its purchases of US goods. Chinese imports of US products between 2015 and 2014 were down 9.6 percent. While the decline was notable, three of the other top import sources to China saw declines: imports from Taiwan were down 2.8 percent, from South Korea were down 8.9 percent, and from the EU were down 0.4 percent. Only Japanese imports saw an increase — of 1.7 percent.

Note: Data for this chart are based on PRC government statistics. The value of PRC imports from the United States is higher than US exports to China because of several data discrepancies between US and PRC trade statistics, reflecting methodological differences regarding shipping costs, as well as tariffs that are applied as goods pass through other customs territories on their way to China.

Top State Goods Exporters to China, 2016

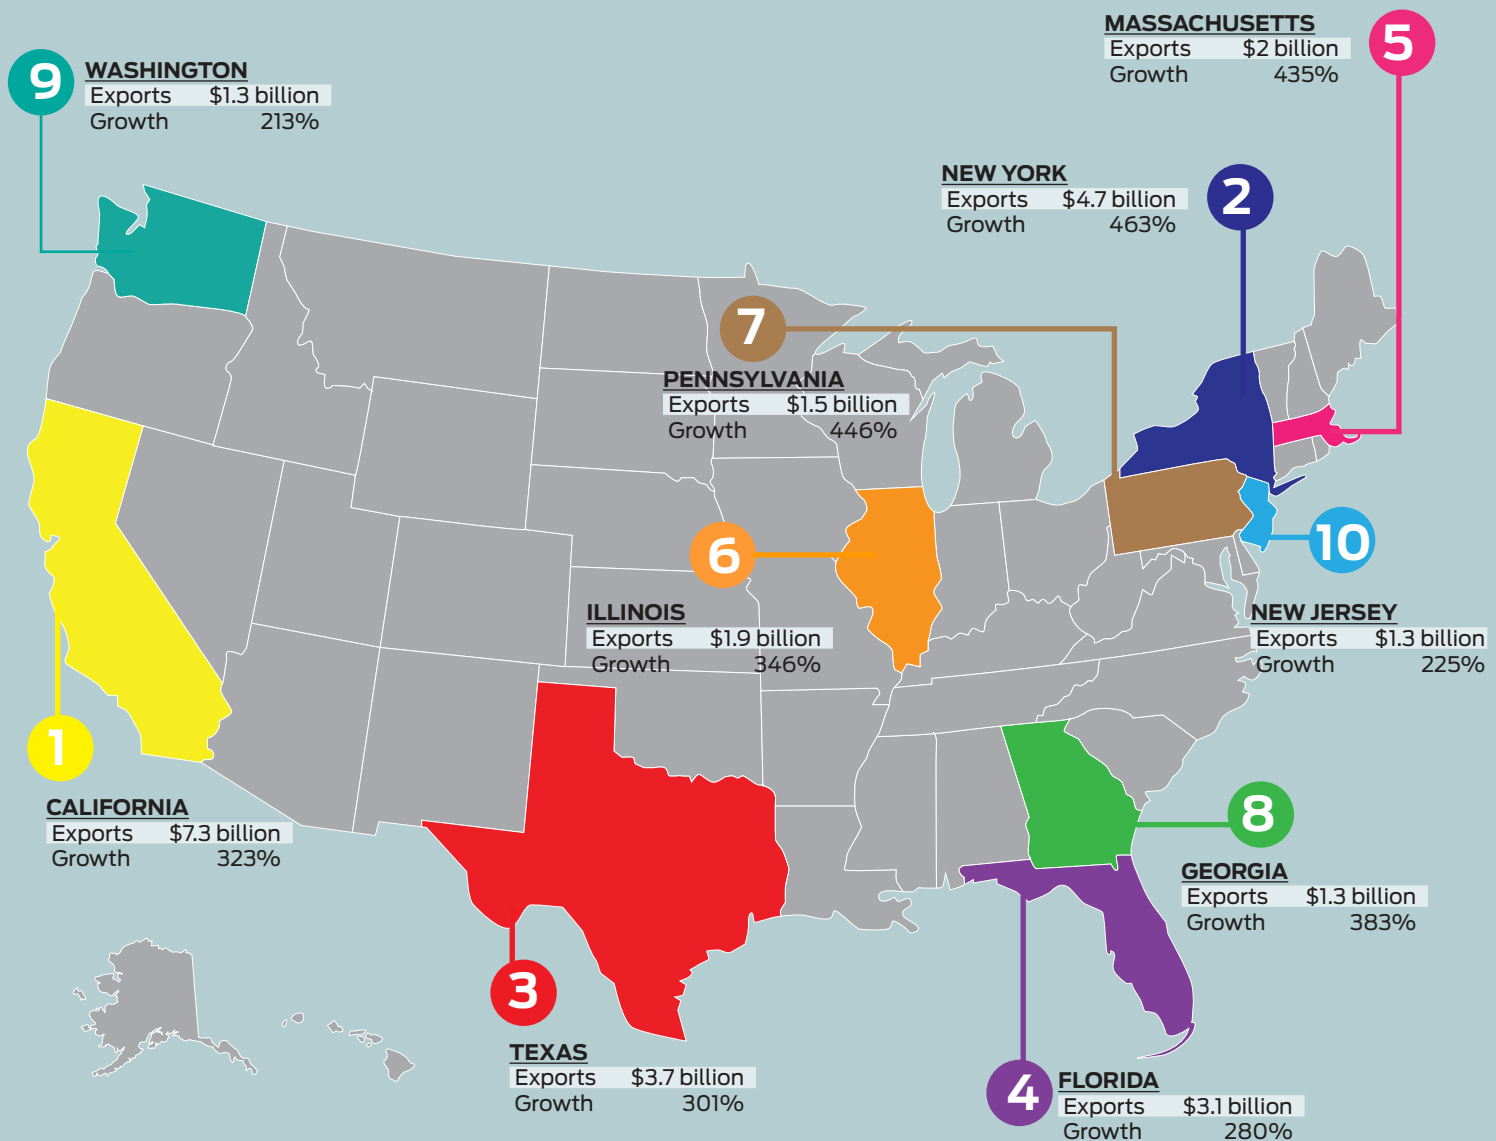

Growth represents the total growth from 2006-2016.

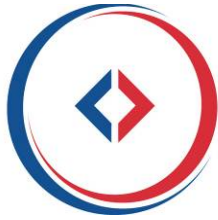

- Thirty states experienced triple-digit goods export growth to China since 2006. Four states – Alabama, Montana, North Dakota, and South Carolina – saw export growth of more than 500 percent over the past decade.
- In 2016, 29 states exported more than \$1 billion in goods to China, while another 11 states exported more than \$500 million. In 2006, only 17 states exported more than \$1 billion to China.
- The top 10 states exporting goods to China in 2016 span the nation. This list includes states that are not often thought of as those benefiting from trade with China – Alabama, Minnesota, Michigan, New York, Ohio, South Carolina and Tennessee.

Top State Services Exporters to China, 2015

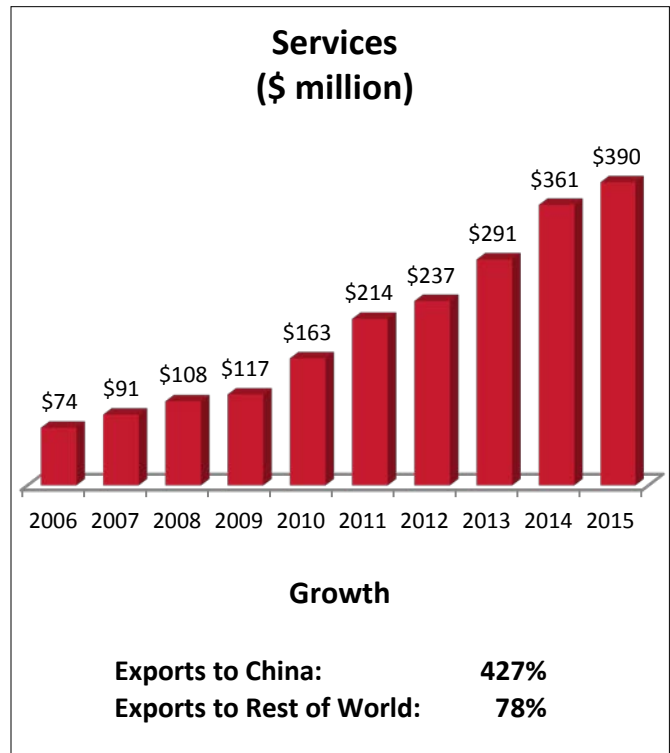

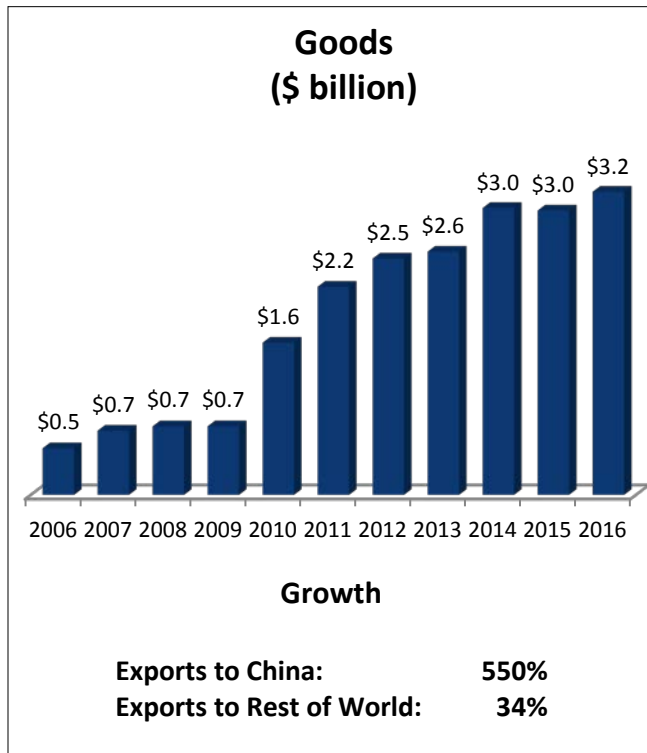

Growth represents the total growth from 2006-2015.

- All 50 states experienced triple-digit services export growth to China since 2006. Sixteen states – Montana, Indiana, Idaho, South Dakota, North Dakota, Iowa, Maine, Nebraska, North Carolina, Vermont, New York, Mississippi, Missouri, Oregon, Rhode Island, and Pennsylvania – saw export growth of more than 400 percent over the period.
- In 2015, 14 states exported more than \$1 billion in services to China, while another eleven states exported more than \$500 million. In 2006, only one state exported more than \$1 billion to China – California.
- The top 10 states exporting services to China in 2015 span the nation. This list includes states that are not often thought of as those benefiting from trade with China – Massachusetts, Georgia, and Pennsylvania.
